SURIYA S

Software Engineer — Backend | Full-Stack | Scalable Systems

Puducherry, India | +91 9176234640 | suriyasivakumar08@gmail.com | linkedin.com/in/suriya-sivakumar | github.com/SuriyaSivakumar20

PROFESSIONAL SUMMARY

A Computer Science Engineering student with hands-on backend engineering experience in payment systems, invoice workflows, ERP integrations, and operational automation, built through a production internship at CaratLane (a Tata product). Comfortable across the stack — Python, Node.js, TypeScript, Golang, Ruby on Rails, SQL, Kafka, and Redis on the backend, with React/React Native on the front end. Strong debugging and root-cause-analysis instincts, working knowledge of asynchronous programming and scalable system design, and experience leading a hackathon team and mentoring junior developers. Seeking fresher Software Engineering roles — backend, full-stack, or platform — at product and engineering-driven companies.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Golang, Ruby, SQL, HTML, CSS
Backend & APIs: Node.js, Express, NestJS, Ruby on Rails, REST APIs, GraphQL, Asynchronous Programming
Frontend: React, React Native, HTML, CSS
Systems & Data: Scalable System Design, MySQL, Sequelize, ActiveRecord, Kafka/KafkaJS, Redis, Sidekiq
Tools & Practices: Git, GitHub, Docker, AWS, Strapi, Debugging, Root-Cause Analysis, Automation, Query Optimization, Supabase
Collaboration: Communication, Mentorship, Leadership, Cross-Functional Collaboration

WORK EXPERIENCE

SDE — CaratLane (A Tata Product) *Dec 2025 – Present*

- **pricing sync:** Updated a Golang service that detected live gold-price increases and pushed timely updates to the internal pricing repository, keeping product pricing accurate across sales channels.
- **Payment method rollout:** Delivered a new store payment method end-to-end — validation, ERP mapping, payment splitting, invoice display, and mobile payment support across connected services.
- **Invoice data integrity:** Replaced hardcoded invoice labels with a CMS-backed, Redis-cached solution, and added an event-driven cancellation handler to invalidate invoice entries for cancelled order items.
- **Diagnostics & traceability:** Built diagnostic scripts (with dry-run support) for payment, receipt, return, and Kafka remediation on status-2 invoices; added order identifiers to logging with null-safe error handling for faster failure tracing.
- **Retry flow hardening:** Fixed retry flows that could mishandle payment data and invoice totals by reusing fetched payment details, applying cash-discount-aware calculations, and filtering balance records by valid states.
- **Internal tooling & automation:** Built an Invoice Error Analyser with dynamic sheet updates and threaded notifications, and implemented Google Chat webhook routing in TypeScript for team-specific alerting.

Software Web Development Intern — Exposys Data Labs *Jun 2025 – Oct 2025*

- Built and maintained React and Node.js features with reusable components and frontend–backend API integrations.
- Refactored existing modules for readability and performance, and participated in code reviews following engineering best practices.

PROJECTS

- **B.I.R.D. — Business Intelligence & Resource Development:** Conversational AI platform for startups and investors built with Python, backend APIs, OpenAI API, Google API, and MySQL; designed backend endpoints and database structures and applied prompt engineering to improve response quality. Deployed on Vercel.
- **AI Resume Screener:** Built a resume-to-job matching tool using BERT embeddings for semantic similarity scoring.
- **Workflow Automation Platform:** Developed an SMTP-based platform to schedule and dispatch validated emails to 1,000+ recipients, with reusable automation flows to reduce manual communication effort.

LEADERSHIP & MENTORSHIP

- Led a hackathon team, coordinating scope, task ownership, and delivery under time pressure.
- Mentored junior teammates on their project, guiding problem-solving approach and execution.

EDUCATION

B.Tech, Computer Science Engineering — Manakula Vinayagar Institute of Technology, Pondicherry University *2022 – 2026*
CGPA: 8.32 / 10

RESEARCH & ACHIEVEMENTS

- Published a Scopus-indexed paper on AI-driven carbon capture and utilisation for climate change mitigation.
- Participated in Smart India Hackathon, Yi-Innovation Hackathon, OpenAI Hackathon, and Unisys Hackathon.
